Metabit project

Jul 2016 - Dec 2016

● *Fullstack Developer*

- A Personality test system for teenage based on MBTI research.
- Tech stacks: React, MongoDB, JSON Web Token, Gulp, NodeJS and hosted on Heroku.
- See online at http://metabit.com.vn/

ABOUT ME

- I am always a self-taught person.
- I am quite comfortable in .NET with C#. However, in the last two years, I was focusing on Javascript, NodeJS and their ecosystem such as React, Angular, Meteor, NoSQL(MongoDB), Build system (Gulp, Webpack).
- In the art of software development, studying code isn't enough; I think we have to study the people behind the software, too. So I read many books (Code Complete 2nd, The Pragmatic Programmer, Don't make me think... and more.). See my reading list at https://github.com/quangnd/reading-list
- I also began a personal blog (based on Jekyll) at quangnd.com
- See my Github profile at https://github.com/quangnd/

SKILLS

Problem Solving	
Self-confidence	
Creative, Innovative	
Teamwork	
Adaptability
